

Mitigation Monitoring and Reporting Program

The California Environmental Quality Act (CEQA) requires that a reporting or monitoring program be adopted for the conditions of project approval that are necessary to mitigate or avoid significant effects on the environment (Public Resources Code 21081.6). This mitigation monitoring and reporting program is designed to ensure compliance with adopted mitigation measures during project implementation. For each mitigation measure recommended in the Final Initial Study-Mitigated Negative Declaration (Final IS-MND), specifications are made herein that identify the action required and the monitoring that must occur. In addition, a responsible agency is identified for verifying compliance with individual conditions of approval contained in this Mitigation Monitoring and Reporting Program.

Mitigation Measure/ Condition of Approval	Action Required	Monitoring Timing	Monitoring Frequency	Responsible Agency	Compliance Verification		
					Initial	Date	Comments
BIOLOGICAL RESOURCES							
BIO-1 Nesting Birds							
<p>To avoid disturbance of nesting and special-status birds, including raptorial species protected by the Migratory Bird Treaty Act and California Fish and Game Code, tree removal activities shall occur outside of the bird breeding season (February 1 through August 30), if feasible. If tree removal must begin during the breeding season, then a pre-construction nesting bird survey shall be conducted no more than 3 days prior to initiation of vegetation removal activities. The survey shall be conducted by a biologist familiar with the identification of avian species known to occur in southern California coastal communities. If nests are found, an avoidance buffer (dependent upon the species and existing disturbances associated with land uses outside of the site) shall be determined and demarcated by the biologist with bright orange construction fencing, flagging, construction lathe, or other means to mark the boundary. All construction personnel shall be notified as to the existence of the buffer zone and to avoid entering the buffer zone during the nesting season. No tree removal activities shall occur within this buffer until the avian biologist has confirmed that breeding/ nesting is completed and the young have fledged the nest. Encroachment into the buffer shall occur only at the discretion of the qualified biologist.</p>	<p>Verify that pre-construction nesting bird surveys have been conducted, if tree removal activities would occur during the bird breeding season. If required, verify that buffers have been implemented.</p>	<p>Confirm surveys have been completed, if needed, prior to grading activities. Monitor throughout construction, if buffers are needed.</p>	<p>Once and periodically, if buffers are needed.</p>	<p>City of Long Beach, Planning and Building Department</p>			

East Broadway Complete Streets Improvement Project

Mitigation Measure/ Condition of Approval	Action Required	Monitoring Timing	Monitoring Frequency	Responsible Agency	Compliance Verification

Transportation/Traffic							
T-1 Signal Timing							
The cycle length at the intersection of Alamos Avenue/3 rd Street shall be increased from 75 seconds to 80 seconds.	Verify that the cycle length has been increased at the Alamos Avenue/3 rd Street intersection signal.	Prior to project completion and operation.	Once	City of Long Beach, Planning and Building Department
